

STEM CLASSROOM KITS

**SUMMER PROGRAMS - CLASSROOMS - CYBER
AFTER SCHOOL PROGRAMS - CAMPS - AND MORE!**

Good afternoon,

My name is Carrie Bryson. I am the owner and founder of the kids science business, [STEM Discovery Boxes](http://www.stemdiscoveryboxes.com). We create custom STEM/STEAM kits filled with fun, hands-on, educational projects and experiments for kids in elementary and middle school classrooms all across the US and Canada.

We collaborate with each school/organization to create the ideal educational package for their program or curriculum. We have a vast inventory of over 100 projects focused on such topics as chemistry, physics, hydraulics, electronics, robotics, and so much more.

Everything that is needed to complete each experiment is included inside the box (*we even supply the batteries!*) Your little STEMists can jump in and start exploring right away without the hassle of hunting and gathering additional supplies and materials.

We help you every step of the way to create a package that fits your course material, time frame, and budget. Our boxes are perfect for classroom learning, after-school programs, youth centers, STEM/STEAM nights, homeschooling, parent/student interactions, summer camps, and more. We provide the tools to help teachers, parents and caregivers lay the groundwork for a lifelong love of STEM learning.

I have attached some additional information about our [STEM Discovery Boxes](http://www.stemdiscoveryboxes.com) and how they could benefit your school, organization, and/or community.

Join the hundreds of other educators who have taken advantage of our easy-prep STEM project packages. If you have any questions, please reach out and I will be happy to assist you.

Thank you,

Carrie Bryson
